

TabloRipper

Overview

TabloRipper is designed to rip all/filtered new or user selected recordings from your Tablo to your PC.

Features

- TabloRipper uses FFMPEG to perform a lossless copy of Tablo videos (<https://www.ffmpeg.org/download.html> , download the “static” version).
- Output file naming conforms to Plex naming conventions (<https://support.plex.tv/hc/en-us/categories/200028098-Media-Preparation>).

Requirements

- TabloRipper requires that you have a recent version of FFMPEG installed.
- TabloRipper is a 64-bit Windows application.
- TabloRipper requires Windows 7 (or above).

Frequently asked questions

Q: The “Your Tablo” list box is empty and the “Status” message displays “No Tablo devices found!”

A: Most likely a local networking issue. When you can locate your Tablo using a browser (<http://my.tablotv.com/>), TabloRipper will also be able to connect.

Q: How do I select which new recordings are downloaded?

A: Enter a combination of “Selection” and “Exclusion” filters. For example, if your selection filter is “csi,extant”, and your exclusion filter is “csi miami”, you’ll rip all episodes of “Extant” and “CSI” except for “CSI Miami”. **Hint:** Use the Tablo program title for your filters! If you enter a filter for “mentalist”, it won’t match the TV series, while a filter of “the mentalist” matches.
